

# CAJON AIR CENTER PHASE II IMPROVEMENT PROJECT

## Project Description and Purpose

The County is currently redeveloping a vacant 70-acre site located in the southeastern corner of Gillespie Field known as the Cajon Air Center. The first phase of the Cajon Air Center development, to construct an underground detention basin at Gillespie Field, was completed last year. The second phase of the development consists of the construction of an aircraft transient apron, which is an area within the airport used for temporary parking of aircraft. Associated drainage, lighting, and utility work are included in the Phase II project footprint. There are five additional phases in the development of Cajon Air Center, future projects will be brought forward to construction as funding becomes available.

## CAJON AIR CENTER – PHASE II TRANSIENT APRON

## Project Benefits

The Cajon Air Center Phase II Project provides the following benefits:

- Contribute to meeting regional aviation goals.
- Meet the existing and forecast market demand for based aircraft facilities to avoid constraining Airport operations.
- Ensure that County Airports complies with Federal grant assurances by maintaining the highest and best use of airport properties.

## Project Funding

The estimated construction cost of the project is \$4.2 million. Funding sources for this project include FAA funding and County of San Diego Airport Enterprise funds.

## Construction Schedule

Advertise & Award Contract	Summer 2018
Construction Start	Fall 2018
Construction Complete	Summer 2019
